

South Central Water District
Headquarters Rain Water Irrigation Display
South Laguna, CA

Designers: Jodie Cook Landscape Design

It's no surprise that today's climate and environment is everchanging. No where is that more evident than California's ever increasing droughtlike climate. Recent statewide executive orders to reduce water usage by 25 percent have sparked concerns with residents. In an effort to help educate residents on what they can do to help, South Coast Water District Director Wayne Rayfield began an initiative to install displays for rain collection and landscaping that is more drought friendly.

With the help of Jodie Cook Landscaping Design, a rain garden was created at the water districts headquarterd in South Laguna, CA. The garden features a fully functional rain collection system and carefully selected drought tolerant plants. The system also features informative panels communicating the importance of water conservation.

Jodie Cook selected iZone Imaging's vibrant, durable custom high pressure laminate to display the interpretive panels. Featured on iZone Imaging's line of unique pedestals from SageMount, these interpretives compliment the native plant life and the overall look of the project.

"There is so much interest in the garden and the tanks being up front and center intrigues people because they can see exactly how they work and connect to the drip irrigation and rooftop." - Jodie Cook

This display is part of a wider initiative to raise public awareness of California's growing concerns over its dwindling water supply. iZone's Imaging's CHPL ensure's that this initial display will remain as beautiful as the future installations and educate residents for many years to come.
